

Fellow Omahawk's:

Your field maintenance team and many club members have been hard at work this past week on field enhancements! Special praise to Luke Hughes for his terrific leadership, planning, skills, resources and work on these significant improvements! Also, Cole Meyo, our field manager, has spent dozens of hours skillfully working on, planning, directing, filming and caring for your field! (Many others have helped too...you know who you are and so do we!)

Since us guys are not usually very observant, here are some clues on the changes, so check them out on Friday at our monthly dinner/meeting:

1. A big green thing has been removed.
2. The runway is VERY rough.
3. Lots of things have been painted brown....can you tell how many?
4. Something is new in the pavilion.
5. Some signs have been removed....replacements coming.
6. Two bushes have been removed.
7. Some big structure has been leveled, straightened, and painted, can you guess what?
8. There are 10 new items that are identical. (Old ones removed and in dumpster.)
9. A new plastic mesh was installed, do you know where? (Poles straightened/replaced.)
10. New chain link fence installed by City Parks, including a new wide gate. Can you tell what was removed and the area is now being mowed by city?
11. Did you find the mobile start up bench?
12. The shed has been cleaned out.
13. A tall pole has been painted orange and white. New bearings ordered to stop squeak.
14. Yet to be done: new Kiosk, information board, 72 MHz flags, runway resurfacing by Omni (date TBD given all the rain).

The field is open to fly off the grass, but the runway is very rough and only does VTOL.

Just a little more short term pain, for a lot of long term gain!

Hope to see you on Friday evening, 6pm, AT THE FIELD for our monthly club dinner and meeting! Come on out and see all the improvements!
